

## Notes for Contributors of *Post Keynesian Review*

### *Editors*

This is a *provisional guide* for those who would like to submit papers to *Post Keynesian Review*, issued by the Japanese Society for Post Keynesian Economics. In what follows, *Post Keynesian Review* is abbreviated as *PKR*.

The content of this guide may be changed without notice.

### 1. Overall Guidelines

*Post Keynesian Review* is a peer-reviewed journal, articles of which are posted in English.

- (1) General guidelines:
  - (a) In publishing articles, the copyright of both authors and the Japanese Society for Post Keynesian Economics will be attached in the bottom of the first page of each article.
  - (b) Articles that are considered for posting in *PKR* are in principle the ones that were unpublished in other refereed English journals.
  - (c) If the submitted article is a revised version of the non-English prototype that was published locally, the manuscript will be taken up.
  - (d) Contributors should not make duplicate submission of the manuscript to other refereed journals.
  - (e) The manuscript that will be submitted for peer-review should be prepared in the PDF-file format.
  - (f) Contributors should send their PDF manuscripts in English to the managing editor by email.
  - (g) At the stage of submission, the contributor needs not to send the source text files to the managing editor. But, later they should be sent to the editorial board either in the MS .doc or  $\text{\TeX}$  file format. Be careful not to include any non-English code in them.
- (2) Style of manuscripts
  - (a) The manuscript should contain the information on authors, their affiliation, if available, and full title of the article. These appears in the first

- page. The short title is necessary for the running title. The lengthy information will be placed at the end of the article, after the Bibliography.
- (b) When more than three authors contribute to one article, the first and the second authors are mentioned.
  - (c) An abstract within approximately 150 words should accompany the manuscript.
  - (d) The keywords should be included, up to 10.
  - (e) Contributors may list up JEL Classification codes, if they wish, after the keywords.
  - (f) Footnotes are permitted, but preferably as few as possible.
- (3) Mathematical expressions, graphs, etc.
- (a) *PKR* accepts mathematical articles. Avoid, however, very special notations or symbols that are employed only in professional journals of mathematics, as much as possible.
  - (b) Mathematical symbols are mostly italicized by default in *PKR*.
  - (c) It is desirable that the mathematical work out will accompany the manuscript in order to assist referees. The mathematical work out will not be published, even if the manuscript is accepted.
  - (d) Avoid the long mathematical expressions that must be folded, as much as possible. Rather, employ temporary variables to make description clear.
  - (e) In numbering equations, it is preferable that the group numbering such as (1.1*a*) and (1.1*b*) is avoided.
  - (f) Theorems, Propositions, Lemmas etc. are numbered sequentially section-wise. Proposition 2.2 comes after Lemma 2.1, for instance,
  - (g) Graphs and diagrams should be drawn as precisely as possible. It is preferable that contributors attach each of them in separate files.
  - (h) Colouring is permitted for drawing graphs and diagrams and creating tables for better readability of the article.
- (4) Style of Bibliography
- (a) In listing papers and publications, their names and titles should be reproduced in the same way as published.
  - (b) Authors' names should be listed strictly as in the original publication.
  - (c) The year of publication should be put after authors' names in parentheses.
  - (d) The title of the journal article should be put between quotation marks.
  - (e) The names of journals and books should be italicized.

## (f) Some examples

Harcourt, G. C.(2006), *The Structure of Post-Keynesian Economics*, Cambridge University Press.

Keynes, J.M. (1936), *The General Theory of Employment, Interest and Money*, MacMillan.

Pasinetti, Luige L.(1962), “Rate of Profit and Income Distribution in Relation to the Rate of Economic Growth,” *Review of Economic Studies* 29(4), pp.267-79.

Ricardo, D.[1817](2005), *Principles of Political Economy and Taxation*, in Sraffa, P.(ed) *The Works and Correspondence of David Ricardo*, Vol. 1, Cambridge University Press.

Robinson, J. (1962), *Essays in the Theory of Economic Growth*, Macmillan.

## (5) In listing literatures in the main text, including footnote, they should be mentioned in the chronological order.

Already posted articles are good examples for preparing manuscripts.

**2. L<sup>A</sup>T<sub>E</sub>X manuscripts**

This *Guides* itself is created by compiling the source T<sub>E</sub>X file with special style files of the editorial board. Description about T<sub>E</sub>X related matters will be made here.

This section concerns manuscript prepared in L<sup>A</sup>T<sub>E</sub>X in advance.

*PKR* is created by compiling T<sub>E</sub>X sources of accepted manuscripts. If the accepted article is not written in the T<sub>E</sub>X format, the translation will be made on the editorial board side. This may take time and posting itself will be delayed.

If authors would like to have earlier posting, it is advised that the L<sup>A</sup>T<sub>E</sub>X source should be prepared in advance.

Today, many articles in economics seems to employ a lot of formula, data exhibitions and illustrations. *PKR* also expects such articles, so that it is important to realize the best layout of the pages as much as possible for both authors and readers. Editors think that the L<sup>A</sup>T<sub>E</sub>X(or T<sub>E</sub>X)-based system gives the best appearance and readability of contents to readers. Editors place one of the top weights on the appearance of articles, especially those containing tables and graphs as in the empirical studies or some symbols as in theoretical model analyses. This is why *PKR* is published with the L<sup>A</sup>T<sub>E</sub>X publishing system.

If the contributor creates PDF files from his/her T<sub>E</sub>X source files, the easiest way to compile them is to use `amsart.cls`.

In near future, `pkart.cls` will be made open.

Other well-maintained style files found in CTAN may be used by authors.

For the sake of convenience for contributors who are not yet accustomed to  $\text{\LaTeX}$ , we supply them with the `template.tex`, as well.
